THREAT

Apple Patches-Up Three Actively Exploited And Identified Zero-Day Vulnerabilities In its iPhone, iPod and iPad Devices

This month Apple released iOS 14.2 and iPad 14.2, which patched up a sum total of 24 vulnerabilities in different parts of the OSes, including sound, crash reporter, kernel, and foundation.

ADVICE

For all your IT equipment (so tablets, smartphones, laptops and PCs), make sure that the software and firmware is always kept up to date with the latest versions from software developers, hardware suppliers and vendors.

Applying these updates (a process known as patching)

Enable automatic updating where possible.
