the North East from common cyber attacks

Google Forms Abused to Phish Credentials

THREAT

More than 200 Google Forms impersonate top brands – including Microsoft OneDrive, Office 365, and Wells Fargo – to steal victims' credentials.

Researchers are warning of phishing attacks that leverage Google Forms as a landing page to collect victims' credentials. The forms masquerade as login pages from more than 25 different companies, brands and government agencies.

ADVICE

1. Make it difficult for attackers to reach users.
2. Help users identify and report suspected phishing emails.
3. Protect your organisation from the effects of undetected phishing emails.
4. Respond quickly to incidents

Further information on how to defend your organisation from email phishing attacks can be found at:
